

# The Electronic School™

Cimple is proud to announce its newest addition to the Cimple line of products: The Electronic School. Here parents, students, teachers, administrators, counselors, and staff can safely and securely view student information through the Internet.

## What is the Electronic School?

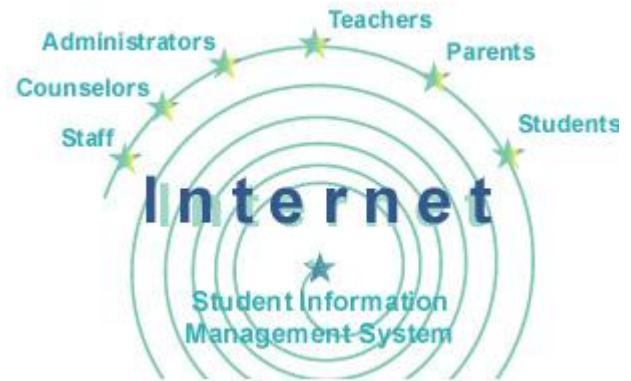

The Electronic School is a Cimple 2000 Secure Internet Product (SIP) that allows parents to view their child's information from home or from work using the Internet.

**NEW** It can also act as a communication portal for parents, students, teachers, counselors, and administrators using email.

## How does it work?

The Cimple 2000 Electronic School is installed on the district's web server\*. It is that easy. A button then appears on the district's home page. When a parent or student connects from home, work, or school using a web browser, they are authenticated with a Digital Certificate, Smart Card, or a UserID and Password (depending on the security option installed). Once authenticated, parents and students are restricted to viewing their own information only. The Electronic School is fully compatible with the leading web browsers (IE, Netscape, and WebTV), providing users with a variety of options to access their information.

**Student Schedule:** Parents could see if a requested schedule change has been made by the Guidance Counselor, find the name of a child's math teacher, or see when their child has a free period. Parents could confirm the courses that their child selected for the next school year, find out if their child's course selection was changed by the Guidance Counselor, or know whether or not there is a possible conflict with their child's schedule next year.

**Student Attendance:** Parents could see how many days their child has been absent from school, find out if their child arrived to school on time today, or know if the attendance office corrected a reported error.

**Student Grades:** Parents could see their child's grades for each marking period, find out if an interim notice was sent out and when, or know if the teacher corrected a reported grade error.

**Student Discipline:** Parents could see how many times their child was referred to the Principal's office for not behaving properly, find out if their child did attend detention after school, or know why their child is being suspended from school.
